Thomas Monte

Senior Software Engineer with 15+ years of experience architecting distributed systems, event-driven microservices, and real-time data pipelines. Skilled across .NET, Go, Scala, TypeScript, and functional programming paradigms.

codeberg.org/snegs

Expertise

- Service Oriented Architectures
- Distributed Systems
- Domain Driven Design
- Eventual Consistency
- Containerization
- Systems Design
- SOLID Design Principles
- Functional Programming
- Data Modeling
- Streaming Big Data

Technologies

- Docker
- Kubernetes
- Dapr
- PostgreSQL
- Kafka
- Redis
- Elasticsearch
- .NET (C#, F#)
- Zig
- Go
- Scala
- Apache Spark
- PHP
- Typescript
- ReactJS
- AngularJS
- SolidJS
- gRPC
- Protocol Buffers

Experience

Senior Software Engineer | Mindbody | January 2024 – May 2026

- Architected an intelligent chatbot for in-product support, using conversational AI to streamline user assistance
- Integrated across provider ecosystems, delivering an agentic support pipeline from AI self-service to human escalation
- Engineered a fault-tolerant architecture sustaining 100% uptime at thousands of concurrent users
- Modernized the legacy codebase through strategic tech stack migration, yielding measurable performance gains

Senior Software Engineer | GuideCX | September 2022 – November 2023

- Designed and decomposed a greenfield distributed architecture, establishing scalable service boundaries and event-driven communication
- Engineered a microservices ecosystem leveraging Dapr, .NET, and Protocol Buffers for cross-service contract enforcement
- Migrated select .NET microservices to Go, reducing resource overhead and latency for throughput-critical pathways
- Built a gRPC communication layer with a TypeScript frontend featuring proto-derived type generation, eliminating serialization drift
- Designed a logical replication pipeline using Kafka Connect and Redpanda to feed a Cube.js analytics warehouse for real-time queries

Principal Software Engineer | Pluralsight | April 2021 – September 2022

- Directed architectural strategy across 4 engineering teams in Pluralsight's B2B domain
- Authored public service contracts for a distributed system, establishing interface boundaries and communication protocols
- Delivered training and mentorship in service-oriented architecture, systems design, SOLID principles, and front-end development
- Spearheaded cross-team infrastructure tooling, including service invocation frameworks, queue abstractions, distributed tracing, and design system foundations

Senior Software Engineer | Pluralsight | June 2019 – April 2021

- Engineered a big data streaming platform for real-time user metric analysis using Apache Spark and Scala
- Designed backend API services in C# and .NET following RESTful principles and clean architecture patterns
- Developed a lightweight front-end state management framework using functional optics in a Flux-inspired codebase
- Led a Material Design-based design system adopted across 3 teams, establishing reusable component primitives
- Built interactive data presentation components and dashboards for analytics visualization
- Introduced TypeScript to the client codebase, reducing runtime errors through compile-time type safety

Senior Software Engineer | Xactware | January 2018 – May 2019

- Engineered Xactware's next-gen online claims platform, architecting the UI and service layer for a greenfield system
- Designed backend service contracts and RESTful APIs using C# and .NET
- Developed front-end components with AngularJS for a responsive SPA experience
- Delivered organization-wide training in functional programming, reactive programming, and front-end technologies
- Championed BDD and TDD across multiple teams, cultivating a culture of code quality and reduced production defects

Software Engineer | Adobe | May 2017 – September 2017

- Designed and developed an internal tool for the Beta Testing and Customer Advisory Board Programs – a single-page application with admin data management and JIRA-integrated dashboards
- Architected the full stack focusing on performance, scalability, and maintainability
- Built custom React components for auto-complete, date/time picking, and other UI primitives
- Developed a backend API layer using PHP
- Redesigned a PostgreSQL database schema to support new requirements, improving query performance and data integrity

Software Engineer | InsideSales | January 2017 – April 2017

- Contributed to integrating InsideSales' Playbooks with Microsoft Dynamics CRM for seamless cross-platform data flow
- Built backend services across a polyglot stack using C#, Scala, and Go
- Developed and maintained the client codebase for the Playbooks Chrome extension using React
- Practiced contract-oriented BDD and TDD across all application layers

Software Engineer | Brigham Young University | August 2015 – December 2016

- Designed and developed a spreadsheet-like web app for real-time collaborative transcription of historical immigration records
- Engineered geospatial interactions including zooming, panning, and measurement overlays
- Optimized rendering to handle millions of records within a single browser page
- Designed an MS-SQL database for the domain's hierarchical record structures
- Built a C# .NET WebAPI server and SPA front-end using React

Software Engineer | TheMathCo | January 2012 – August 2015

- Designed and developed an online math learning platform with interactive curriculum delivery and assessment
- Implemented a custom payment system integrated with Authorize.NET for subscriptions, invoicing, and reconciliation
- Built a content management pipeline supporting file uploads, homework submissions, and automated grading
- Developed an admin dashboard for payment processing, class scheduling, user management, and analytics

Junior Software Engineer | Prefeitura Municipal de Florianópolis | January 2010 – December 2010

- Developed an outage tracking system using PHP and vanilla JavaScript for municipalities to log and monitor service disruptions
- Adapted the application to a new custom design language, re-skinning the full UI
- Built reporting and charting components for operational insights
- Implemented role-based authentication and authorization

Education

- **AS Information Systems** – LDS Business College, Salt Lake City, UT (2011 – 2013)
- **BSc Computer Science** – Brigham Young University, Provo, UT (2014 – 2017)

Relevant Courses

- Systems Engineering
- Computer Graphics
- Internet Programming
- Network and Concurrency
- UX Engineering
- Computational Theory
- Discrete Structures
- Data Structures
- Software Design
- Algorithm Design and Analysis

Languages

- **English:** Advanced
- **Portuguese:** Native
- **Spanish:** Fluent
- **Japanese:** Basic
